Subject: Phase I Reports and Mercury

Mike,

In follow up to our conversation today, a few bullets about mercury sampling at the Site:

- More than 400 soil samples collected at the Site – No exceedances of EPA Industrial or Residential RSLs for Mercury
- Maximum concentration of mercury detected in all soil samples was 0.27 mg/kg – For reference the EPA residential RSL is 1.1 mg/kg

In regards to the reports – Once we have the approval, the digital copies will be posted to the website and Ann Green will issue a note to all CLP members. Nino should be able to download the report right from the website. I am also sending hardcopies to Steve Wright, and he will make sure they are placed in the library.
